

TIPSOI

AI WORKFORCE ASSISTANT

Current Capabilities — User Stories & Demo Flows

0. Document Scope

This document captures the User Stories, and end-to-end Demo Flows for Tipsoi AI Workforce Assistant capabilities that are live, in active development, or demo-ready as of May 4, 2026.

Stories are organized by persona and carry a priority tier: P0 = live and shipped · P1 = in active development · P2 = next cycle.

1. Capability Matrix

The matrix below maps every documented capability to persona availability and current delivery status. Use this as the single source of truth for demo scoping, stakeholder communication, and sprint planning.

Capability	Employee	Line Manager	HR Admin	Status
View own attendance report (any period)	✓	✓	✓	Live
View own late report	✓	✓	✓	Live

View own leave balance	✓	✓	✓	Live
Apply for leave (full day or half day)	✓	✓	✓	Live
Apply for late regularisation	✓	✓	✓	Live
General tech support — knowledge base Q&A	✓	✓	✓	Live
View team attendance / absences / present counts	—	✓	✓	Live
Attendance analysis — drill-down by employee or dept	—	✓	✓	Live
Employee lookup by ID	—	✓	✓	Live
Smart missing-punch notification → leave/late flow	✓	—	—	Live
Smart late-arrival notification → regularisation flow	✓	—	—	Live
Smart shift roll-up notification → analysis thread	—	✓	✓	Live
Leave approval via AI chat (with confirm gate)	—	✓	✓	In Progress
Leave request notification →	—	✓	✓	In Progress

context-aware approval thread				
Pre-approval context surfacing (balance, history, coverage)	—	✓	✓	In Progress
Payroll execution with 2FA gate and anomaly summary	—	—	✓	Phase 3A
Worker WhatsApp interface — Bengali self-service	✓	—	—	Phase 3B
Broadcast notification compose and send from chat	—	—	✓	Planned

Status Key

Live: Deployed and available in production. **In Progress:** Actively in development for current sprint. **Planned:** Scoped and roadmapped; not yet in active development.

2. Jobs to Be Done

The JTBD framework identifies the functional, emotional, and social jobs users are hiring Tipsoi AI Assistant to do — distinct from features or user stories. Each job is defined by the situation that triggers it, the capability the user needs, and the outcome they are trying to achieve.

2.1 Employee Jobs

JOB	Verify my own attendance record without HR involvement
When...	I suspect my attendance was marked incorrectly, or I want to review my own record before a payroll period closes or a performance review begins
I want...	ask the AI "show me my attendance this month" and receive an accurate, date-by-date breakdown — in Bengali or English — without going to the HR office
So I can...	<i>identify discrepancies and raise corrections with evidence, before payroll closes and before the issue becomes a formal dispute</i>

JOB	Understand my late arrival history before my manager does
When...	I want to know how often I have been late this month or quarter before I am called into a discussion about it
I want...	ask in plain language and receive a summary of my late arrivals — dates, minutes late, and whether each was regularised — without supervisor involvement
So I can...	<i>stay ahead of my own attendance record instead of being blindsided in a performance review</i>

JOB	Apply for leave from my phone in my language, without navigating forms
When...	I need time off and I am already at work or on the floor — not at a desk, and not able to navigate multi-screen HR workflows

I want...	tell the AI what I need in plain words and have it handle the leave application — balance check, form submission, confirmation — end-to-end in one conversation
So I can...	<i>submit a correct, complete leave request in under 60 seconds without asking HR for help or making a mistake on the form</i>

JOB	Regularise a late arrival before it becomes a permanent unexcused record
When...	I have just arrived late to my shift and I am already rushing — the last thing on my mind is opening an HR form
I want...	receive a notification from the AI that recognises my situation and offers to file the regularisation with one tap, completing the process in the same thread
So I can...	<i>close the admin loop on the spot — in the same motion as arriving at work — before the workday demands my full attention</i>

JOB	Get instant answers to Tipsoi questions in my language, at any hour
When...	I do not know how a feature works and the HR team is busy, unavailable, or it is outside office hours
I want...	ask the AI in Bengali or English and receive an accurate, step-by-step answer grounded in Tipsoi documentation — not a guess
So I can...	<i>resolve my question independently, without raising a support ticket or</i>

	<i>waiting for a response that may arrive too late to be useful</i>
--	---

2.2 Line Manager & HR Admin Jobs

JOB	Get a real-time pulse on my team's attendance the moment the shift starts
When...	I am on the floor 45 minutes into a shift and I need to know who is missing, late, or has an unresolved absence before the day gets away from me
I want...	receive a proactive notification with a structured summary of shift exceptions, and be able to drill down conversationally — "show me only Night Shift" or "who was late more than twice this month"
So I can...	<i>act on attendance exceptions in real time — not after the fact when the damage is already done and the payroll window is closing</i>

JOB	Understand whether an attendance problem is a pattern before confronting it
When...	I see a late arrival or absence in today's notification and I do not know if this is a first occurrence or the third time this month
I want...	ask "has this employee been late before?" and receive a historical answer in the same thread — without switching to a separate report or screen
So I can...	<i>approach the conversation with evidence and full context, not just a reaction to a single incident that may look worse or better than the full picture</i>

JOB	Process a leave approval in under 2 minutes, directly from a notification
When...	an employee's leave request lands on my phone while I am between meetings or away from my desk
I want...	tap the notification, immediately see the employee's leave balance, history, and team coverage context, then approve or reject with one tap and an explicit confirmation
So I can...	<i>keep leave decisions moving without blocking my employees — or blocking my own day with unnecessary screen navigation and context switching</i>

JOB	Query attendance data for any period without running manual reports
When...	I need late arrival counts, absence rates, or attendance summaries for a specific period, department, or individual employee to prepare for a management meeting
I want...	ask in plain language and receive a synthesised answer with patterns and anomalies surfaced automatically — not raw export data I have to interpret myself
So I can...	<i>walk into that meeting with accurate insight in 30 seconds, instead of spending 15 minutes pulling and reading reports across multiple screens</i>

2.3 Smart Notification Jobs

JOB	Get prompted to act on my late arrival before it becomes a permanent problem
-----	--

When...	I arrive late and I am already rushing — the admin task of filing a regularisation is the last thing I am thinking about
I want...	receive a notification from the AI that recognises exactly what happened and offers to complete the regularisation for me — in one tap, before I even open the app
So I can...	<i>close the admin loop on the spot, in the same motion as arriving at work, with zero navigation and zero additional cognitive load</i>

JOB	Make an informed leave approval without running a separate investigation
When...	I receive a leave approval request and I need to know whether the employee has been taking excessive leave or whether approval creates a coverage gap in my team
I want...	the AI to proactively surface the employee's leave count, remaining balance, and recent attendance pattern before I act — without me having to ask
So I can...	<i>approve or reject with confidence, knowing I have the full picture and can stand behind the decision if it is ever questioned</i>

3. User Stories

3.1 Employee Stories

US-E01 · P0

FRONTLINE
EMPLOYEE

As a **Frontline Employee**, I want to ask the Tipsoi AI to show me my attendance record for any date range I specify so that I can verify my own data, spot discrepancies, and raise corrections before payroll closes — without visiting the HR office or waiting for a supervisor.

ACCEPTANCE CRITERIA

- AI fetches live attendance data scoped exclusively to the authenticated employee's own records
- Response shows a date-by-date breakdown with check-in time, check-out time, and attendance status (Present / Late / Absent)
- Employee cannot access any other worker's data — enforced at the API layer, not just the UI
- Employee can ask follow-up questions in the same thread: "How many days was I late in April?"
- Available in English and Bengali; data is always pulled live, never from AI memory or inference

US-E02 · P0

FRONTLINE EMPLOYEE

As a **Frontline Employee**, I want to ask for my late arrivals report over a specific period so that I can understand my punctuality pattern before a performance review, without having to interpret raw shift data myself.

ACCEPTANCE CRITERIA

- AI retrieves late entries for the specified range and presents a summary: total late days, average minutes late, and worst occurrence
- Defaults to the current month when no date range is specified

- AI distinguishes between approved late (regularised) and unapproved late, and surfaces the difference clearly
- Data is always pulled live — never from AI memory or inference

US-E03 · P0

FRONTLINE EMPLOYEE

As a **Frontline Employee**, I want to apply for late regularisation through the AI assistant when I arrive late to a shift so that I can submit the justification quickly — especially when I am already on the floor — without navigating the app's form screens manually.

ACCEPTANCE CRITERIA

- AI collects date, reason, and late type through conversational flow using tappable chips for enumerable values
- Confirmation card shown before any submission: date, shift, minutes late, reason, and current late status
- Employee must explicitly tap a Confirm button — typing "yes" does not trigger submission
- AI confirms submission with reference ID and explains what happens next (manager review)
- If triggered from a smart late notification, the entire flow completes within that thread — no app navigation required

US-E04 · P0

FRONTLINE EMPLOYEE

As a **Frontline Employee**, I want to apply for leave through the AI assistant by describing my need in plain language so that I can complete the full leave application workflow in a single chat session without opening any other screen.

ACCEPTANCE CRITERIA

- AI calls `getLeaveCategories` to resolve leave type names to IDs before proceeding — never guesses category

- AI checks leave balance and informs the employee of available days for the requested type
- AI collects: leave type, start date, end date, reason — using tappable chips for enumerable choices
- Confirmation card shown before submission: type, dates, duration, and remaining balance after approval
- Employee confirms via explicit button tap only; no submission from text command
- Available in English and Bengali

US-E05 · P0

FRONTLINE EMPLOYEE

As a **Frontline Employee**, I want to ask the Tipsoi AI how-to questions about platform features in my own language so that I can resolve operational doubts immediately without raising a support ticket or waiting for a training session from HR.

ACCEPTANCE CRITERIA

- AI answers exclusively from the Tipsoi knowledge base — does not speculate or answer from general knowledge
- Questions outside Tipsoi's domain are gracefully declined: "I can only help with Tipsoi-related questions"
- Available in English and Bengali, 24/7, independent of support team availability

3.2 Line Manager & HR Admin Stories

US-A01 · P0

LINE MANAGER / HR ADMIN

As a **Line Manager or HR Admin**, I want to query late arrivals, absences, and present counts for employees under my supervision for any date or range so that I can monitor shift compliance in real time and take action before payroll closes — without pulling manual reports.

ACCEPTANCE CRITERIA

- Results scoped to the authenticated manager's own reportees only — no cross-department or cross-organisation data access; enforced at the API layer
- Results include employee name, shift, status, and minutes late where applicable
- Manager can narrow results conversationally: "Show me the Night Shift only" or "Who was absent more than twice this week?"
- Live data with timestamp shown to confirm freshness; AI never responds from memory

US-A02 · P0

LINE MANAGER / HR ADMIN

As a **Line Manager or HR Admin**, I want to ask analytical questions about my team's attendance data — by employee, department, or time period — and receive synthesised insight rather than raw data so that I can identify patterns and anomalies and act on them proactively.

ACCEPTANCE CRITERIA

- After fetching data, AI surfaces patterns automatically without being prompted: "Rahim has been late 4 of the last 5 Mondays"
- Manager can drill down conversationally: "Break that down by department" or "Show only employees with 3+ absences"
- Anomalies surfaced proactively in notification-initiated threads — manager does not need to ask
- Response includes suggested next actions as tappable chips: "View full month" · "Message employee" · "Export"
- All patterns grounded in live data — never in assumption or inference

US-A03 · P0

LINE MANAGER / HR ADMIN

As a **Line Manager or HR Admin**, I want to apply for my own leave or late regularisation through the AI assistant so that I can handle my own HR self-service tasks in the same interface I use for team management.

ACCEPTANCE CRITERIA

- Identical flow to US-E03 and US-E04 — manager is treated as an employee for own applications
- Context switch is seamless: AI recognises whether the request is for the manager's own record or a team action and handles accordingly without clarification prompts

US-A04 · P0

LINE MANAGER / HR ADMIN

As a **Line Manager or HR Admin**, I want to ask the Tipsoi AI for guidance on platform configuration, policy setup, or workflows in plain language so that I can self-resolve operational questions instantly — particularly outside Dhaka business hours.

ACCEPTANCE CRITERIA

- AI answers from the Tipsoi knowledge base with accurate, cited responses; covers attendance configuration, leave policy, payroll rules, shift management, and device troubleshooting
- Admin can ask follow-up questions in the same thread for step-by-step guidance
- Available in English and Bengali; no dependency on support team availability

3.3 Smart Notification — Employee Stories

US-N01 · P0

FRONTLINE EMPLOYEE

As a **Frontline Employee** who has not checked in 45 minutes after their shift started, I want to receive a smart AI notification that recognises my situation and offers a direct path to apply for leave or regularise my late so that I can take the right HR action in under 30 seconds — from the notification itself.

ACCEPTANCE CRITERIA

- Triggers once per shift when: no punch is recorded, no leave exists for that date, and grace period + 45 minutes have elapsed
- Notification displays the AI avatar — visually distinct from standard system pings
- Copy is concise and human: "Your shift started 45 min ago. Running late or need to apply leave?"
- Tapping opens a new chatbot thread pre-loaded with employee context: shift time, current status, and leave balance — no loading spinner visible
- Employee completes the entire action without leaving the chat thread

US-N02 · P0

FRONTLINE EMPLOYEE

As a **Frontline Employee** who has arrived late past the shift grace period, I want to receive a notification acknowledging my late arrival and offering to help me regularise it so that I am proactively prompted before it becomes a permanent unapproved record.

ACCEPTANCE CRITERIA

- Notification triggers when first punch is recorded after the grace period for the assigned shift
- Copy: "Hi [Name], you were [X] minutes late today. Want to apply for late regularisation?"

- Tapping opens a new chatbot thread pre-loaded with: late date, shift, minutes late, and reason input
- AI collects reason conversationally and presents a confirmation card before submission

3.4 Smart Notification — Admin & Leave Approval Stories

US-N03 · P1

LINE MANAGER / HR ADMIN

As a **Line Manager or HR Admin**, I want to receive a smart notification whenever an employee submits a new leave request, with a tap-to-act experience that lets me review context and approve or reject directly from the chatbot so that I can process leave decisions in seconds — with full context — without navigating to the leave management screen.

ACCEPTANCE CRITERIA

- Notification triggers immediately when a reportee submits a leave application; copy: "[Employee Name] applied for [Leave Type] — [Dates]. Tap to review."
- Tapping opens a new chatbot thread pre-loaded with: employee name, leave type, dates, duration, reason, and remaining balance
- Manager can ask context questions before deciding — AI fetches live data and responds in the same thread
- Approve and Reject rendered as explicit action buttons; not as conversational text commands
- Confirmation card shown before action fires; action is only executed after explicit button tap
- Result posted in the same thread: "Leave approved. [Employee] has been notified."
- On reject: AI collects rejection reason conversationally before submitting

US-N04 · P1

LINE MANAGER / HR ADMIN

As a **Line Manager or HR Admin**, I want the AI assistant to proactively surface relevant context about an employee before I make a leave approval decision so that I can make informed, consistent decisions — not approve or reject blindly based on a single request.

ACCEPTANCE CRITERIA

- When an approval thread opens, AI automatically renders — without being asked: employee's leave balance for the requested type, number of leave applications in the past 30 and 12 months, and whether requested dates conflict with any team leave or shift coverage gaps
- Manager can ask follow-up: "How was their attendance this month?" — AI fetches and presents inline
- Context always retrieved live — never inferred or hallucinated
- Context rendered in a structured card above the Approve / Reject buttons

4. Demo Flows

Each flow is designed to be executed live in 3–5 minutes, demonstrating end-to-end AI-native value. Flows are ordered for a progressive narrative arc: from simple self-service through proactive smart intervention to managerial decision support.

FLOW 01

Employee Self-Service — Leave Balance & Application

Persona: Frontline Employee **Channel:** Flutter Mobile **Duration:** ~3 minutes live

An employee wants to take a few days off next week and needs to check their balance before applying — entirely from their phone, in one conversation.

#	ACTOR	ACTION
---	-------	--------

1	Employee	Opens AI chat and types: "How many casual leaves do I have left?"
2	AI	Calls <code>getMyLeaveBalance</code> → returns live balance. Responds: "You have 8 Casual Leave days remaining this fiscal year."
3	Employee	"Apply casual leave from May 12 to May 14, family reasons"
4	AI	Calls <code>getLeaveCategories</code> to resolve ID → calls <code>getOfficeFiscalYear</code> → presents leave type chip to confirm selection
5	AI	Shows confirmation card: Type · Dates (3 days) · Reason · Balance after approval (5 days remaining)
6	Employee	Taps Confirm
7	AI	Calls <code>applyForLeave</code> → confirms: "Leave applied. Reference: #20982. Your manager will be notified."

"The employee never opened a form. They never navigated a screen. They were done in under 60 seconds."

FLOW 02

Smart Late Notification → Employee Regularisation

Persona: Frontline Employee **Channel:** Flutter Mobile **Duration:** ~3 minutes live

An employee arrives 50 minutes late. Before they even open Tipsoi, the AI has already reached out — and will handle the entire regularisation in that notification thread.

#	ACTOR	ACTION
1	System	Employee's first punch records at 08:50 AM for a shift that started at 08:00 AM (10-minute grace period)
2	Smart Notif.	Phone receives: "Hi [Name], you were 50 minutes late today. Want to apply for late regularisation?" — AI avatar visible
3	Employee	Taps notification
4	AI (new thread)	Opens pre-loaded with shift context and late status. "I see you came in 50 minutes late this morning. Want me to file a regularisation? What was the reason?"
5	Employee	"Traffic was bad"
6	AI	Presents confirmation card: date · shift · minutes late · reason. Confirm / Cancel buttons rendered
7	Employee	Taps Confirm
8	AI	Submits regularisation. "Done. Your late regularisation for today has been submitted for manager approval."

"The AI met them at the moment that mattered. No HR visit. No form hunting. One tap from the notification."

FLOW 03

Shift Attendance Roll-Up → Manager Analysis

Persona: Line Manager **Channel:** Mobile + Web **Duration:** ~4 minutes live

A manager receives a shift roll-up notification and wants to know whether today's absences are a pattern. They go from notification tap to historical insight in a single thread — without opening a single report screen.

#	ACTOR	ACTION
1	Smart Notif.	Manager receives: "Morning Shift (8:00 AM): 2 late arrivals, 1 no-show. Tap to view."
2	Manager	Taps notification
3	AI (new thread)	Renders structured attendance card with the 3 exceptions. Unprompted below the card: "Rahim has been absent 3 consecutive Mondays."
4	Manager	"Show me Rahim's full attendance this month"
5	AI	Calls <code>getMonthlyAttendance</code> scoped to Rahim → presents inline card with date-by-date breakdown
6	Manager	"And how many leaves has he taken this year?"
7	AI	Calls leave history for Rahim → summarises: "3 approved leaves, 2 pending, totalling 9 days used."
8	Manager	Taps Message Employee chip

"Five minutes after the shift started, the manager had a full picture of a recurring issue — without opening a single report screen."

FLOW 04

Leave Request Notification → Approval with Full Context

Persona: HR Admin / Line Manager **Channel:** Web **Duration:** ~3 minutes live **Status:** In Progress (P1)

An employee submits a leave request. The manager gets a notification and wants to make a fast, well-informed decision — with employee history surfaced automatically before they even ask.

#	ACTOR	ACTION
1	Smart Notif.	Manager receives: "Fatema applied for 3 days of Casual Leave (May 15–17). Tap to review."
2	Manager	Clicks notification (web)
3	AI (new thread)	Renders leave summary card. Unprompted below: "Fatema has 5 Casual Leave days remaining. She has taken 2 leaves in the past 30 days."
4	Manager	"Any other team members on leave those days?"
5	AI	Checks team leave data → "No overlapping leaves for those dates in your team."
6	Manager	Taps Approve
7	AI	Shows confirmation card: "You are approving 3 days Casual Leave for Fatema Begum. Remaining balance will be 2 days. Confirm?"
8	Manager	Taps Confirm
9	AI	Calls approveLeave → "Approved. Fatema has been notified. Leave balance updated."

"The manager made a fully informed approval in under 2 minutes, from the notification. No screen switching. No second-guessing."

FLOW 05

Admin Attendance Analysis — Monday Morning Briefing

Persona: HR Admin **Channel:** Web **Duration:** ~4 minutes live

An HR Admin needs a pulse on last week's attendance performance before a management meeting. A task that used to take 15 minutes across 4 screens takes 90 seconds in conversation.

#	ACTOR	ACTION
1	HR Admin	Opens AI chat: "Give me an attendance summary for last week"
2	AI	Fetches last week's data → presents headline card: total present, total late, total absent, percentage attendance
3	HR Admin	"Which department had the most absences?"
4	AI	Breaks down by department inline in the same thread
5	HR Admin	"Show me the names of people who were absent more than twice"
6	AI	Calls <code>getDailyAbsents</code> with filtered parameters → lists employees meeting the threshold with department and shift
7	HR Admin	"Export this"
8	AI	Renders Download PDF and Download Excel buttons. File named automatically.

"A report that used to take 15 minutes across 4 screens took 90 seconds in a conversation."

FLOW 06

New Admin Onboarding — How-To Self-Service

Persona: New HR Admin **Channel:** Mobile or Web **Duration:** ~3 minutes live

A newly onboarded HR admin needs to configure a custom overtime rule. No support ticket. No training session. Just a question — answered accurately, in their language, at midnight.

#	ACTOR	ACTION
1	HR Admin	"How do I set up overtime for employees who work more than 8 hours?"
2	AI	Searches knowledge base → responds with step-by-step guidance, citing the specific documentation section
3	HR Admin	"What if they work on a Friday public holiday — is that calculated differently?"
4	AI	Retrieves holiday overtime rule from KB → answers accurately with policy context, in the same thread
5	HR Admin	"Can you apply that rule for me?"
6	AI	Gracefully declines (out of current scope): "I can't configure payroll rules directly yet — that's coming soon. Here's the Payroll Settings screen where you can apply this yourself."

"The admin got the answer in their language, at midnight, from their phone. No ticket raised. No waiting."

LOGO RATIONALE

The mark is a **fingerprint arch** — four concentric ridges directly reference *tipsoi* ("fingerprint" in Bengali) and the attendance-tracking core of the product. The ridges graduate in opacity, building outward from a dense core to suggest an **expanding intelligence network**. The innermost ridge resolves into a **neural spark** — a filled circle with a hollow centre and upward pulse line — representing the AI reasoning layer that sits at the heart of every workflow. The mark is fully legible at 16px and scales cleanly to 512px for app stores.
